

CloudCheck

At a glance

Many businesses are beginning to recognise that with a hybrid or multi-cloud approach they can get the best of both worlds: on-demand access to IT resources, together with the flexibility to move workloads on or off site to meet specific needs. How do you know whether your organisation is ready for cloud adoption and which workloads are suitable for placement in the public cloud?

CloudCheck with Xtravirt evaluates your organisation's readiness for adopting a hybrid / multi-cloud solution and guides you through the options from several prominent public cloud providers.

Feature benefits

- Validate business case and accelerate enablement for adopting a hybrid / multi-cloud model.
- Identify use cases and benefits through an expert review of your existing environment and services for hybrid / multi-cloud suitability, including a structured TCO analysis
- Reduce the time needed to gain insight into security and compliance requirements when adopting multi-regional data residency
- Assess and benchmark cost model options, contractual obligations, and compare workload resource profiles

Deliverables

- CloudCheck with Xtravirt examines your functional and business requirements and applies these to use cases from industry recognised native public cloud providers, such as Microsoft, AWS and Google as well as VMware Cloud destinations such as VMC on AWS, IBM and OVH.
- We explain how each vendor delivers their cloud offering and uncover unique benefits relevant to your organisation. We explore the functional aspects of administration and provisioning, as well as delving into more complex topics such as integration planning.
- Upon completion of this assessment, you'll have a clearer understanding of the roadmap for your organisation to make hybrid / multi-cloud adoption as effective as possible from both an IT and business perspective.

Activities and outcomes

Xtravirt's service delivers the following:

- Understanding of your current and future business requirements and alignment of these to cloud provider use cases and features, to support your business case
- Explanation of what each cloud provider offers in order to establish strengths and identify which are suited and relevant to your organisation's requirements
- Review of your current technology platforms and how they fit into service delivery as part of a hybrid / multi-cloud solution
- Review of IT processes required to support a hybrid / multi-cloud solution

- Technical deep dive into provider functionality covering topics such as access portals, provisioning services, inbound workload migration and external network connectivity
- Discussion around the next steps of your IT journey, including the transition methodology and how to achieve quick wins

Upon completion of this engagement we will provide two reports:

- Cloud provider recommendation report
- Cloud readiness assessment report

Schedule

Week 1	<ul style="list-style-type: none"> • Identify organisational requirements • Map requirements against cloud vendors • Business and technology discovery workshops • Financial TCO Analysis
Week 2	<ul style="list-style-type: none"> • Operational workflow and gap analysis • Presentation of the provider recommendation and assessment findings • Roadmap and next steps
